MERE ODORS DO NOT

FAZE CLOTHES MOTHS

Does the mere odor of a moth preparation repel a clothes moth? Scientists state it does not.

Paradichlorobenzene, a chemical widely used as^a fumigant, has value in controlling clothes moths if used in sufficient quantity in closets, trunks, and other containers which are closed tightly enough to prevent escape of the gaseous fumes given off when paradichlorobenzene is exposed to the air. It is a killer of clothes moths, their eggs and larvae, when used in tight containers at proper dosage. One pound of paradichlorobenzene to 100 cubic feet of tightly closed space is recommended by _____
_____. A closet 8 feet high, 4 feet wide, and 3 feet deep contains 96 cubic feet.

Sprays, to be effective, must be brought in contact with the moths or their larvae. Instructions should provide for cleaning all articles to be sprayed and for spraying thoroughly, paying particular attention to seams and folds. Unless the articles sprayed are to be stored immediately in moth-tight containers, directions should recommend that the spray treatment be repeated at least once a month.
